DETAILED ACTION

Reasons for Allowance

The following is an examiner's statement of reasons for allowance:

Claims 1, 15 and 26-29 are allowable over the prior art of record. The closest prior art of record Fraser, teaches a program that accepts tree grammar and outputs a C program that discovers an optimal parse of trees but not the claimed plurality of operators that are associated with a tree. The reasons for allowance of these claims are that the prior art of record neither anticipates, nor renders obvious the recited combination as a whole, including the limitations being indicated in independent claims 1 and 26 as "identifying a child node that is associated with the parent operator node; determining if the child node relates to an operator for which top-down processing is capable of being performed, wherein the top-down processing is capable of being performed when a result for the operator is capable of being generated without storage of the result for the parent operator node; calling and executing the operator for the child node to generate a result using a processor", in independent claims 15 and 28 as "determining whether the parent operator node is related to a first child operator node that is eligible for top-down processing, wherein the first child operator node is eligible for the top-down processing when a result for an operator associated with the first child operator node is capable of being generated without storage of the result for the parent operator node", in independent claim 27 as "means for identifying a child node that is associated with the parent operator node; means for determining if the child node

Art Unit: 2168

relates to an operator for which top-down processing is capable of being performed, wherein the top-down processing is capable of being performed when a result for the operator is capable of being generated without storage of the result for the parent operator node; calling and executing the operator for the child node to generate a result using a processor”, and in independent claim 29 as “means for determining whether the parent operator node is related to a first child operator node that is eligible for top-down processing, wherein the first child operator node is eligible for the top-down processing when a result for an operator associated with the first child operator node is capable of being generated without storage of the result for the parent operator node”.

Dependent claims 2-14, 16-25 and 30-43 are allowable at least for the reasons recited above including all the limitations of the allowable independent base claim upon which they depend.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”
